DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 10-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Timoteo (6,168,629; cited by Applicant).

Timoteo discloses the claimed invention including implanting a femoral component 1 comprising first, second and third segments, e.g., 2, 3, 9, each having a femoral fixation surface, a unifying bearing surface, and assembly surfaces 12, 13, 14, 15. The assembly surfaces are generally planar and self-align and fasten together via threaded fasteners 18, 19 and complementary holes comprising threads 5, 6, 7, 8, 16, 17. The assembly surfaces are recessed below the bearing surface and are beveled. See Figures 1-6 and column 1, line 52 - column 2, line 44.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Timoteo (6,168,629; cited by Applicant).

Timoteo discloses the claimed invention except for explicitly reciting that the implant can be formed of one of titanium, cobalt alloy, alumina and zirconia. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have formed the implant of Timoteo of any of numerous known implant materials, including titanium, cobalt alloy, alumina and zirconia, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.
